

BELT DRIVES LTD. PINION GEARS

The PG-100A is a special application pinion gear used for certain custom builds where a wider rear tire and spacer between tranny case and our motorplate has been added to a stock motorcycle in certain cases. The PG-100A is 4.660" long.

Belt Drives Ltd. makes (4) pinion gears to fit all of BDL's primary drives, chain or belt drive.

These pinion gears are specific for certain kits. **Note:** All BDL pinion gears are (9) tooth
The PG-100 is the only pinion gear that BDL makes that uses a special internal tooth washer and a special spring and internal tube style spacer. The PG-100 is only for BDL open belt drives kits from 1986-2006. The PG-100 is 3.315" long.

The PG-200 is a pinion gear for BDL open belt drives for Shovelheads. 1970-1978, The PG-200 is 2.864" long

The PG-300 is just a pinion gear only, no screws or end cap reducer. And is for the BDL chain drive kits 1994-2006, and enclosed belt drive kits. 1989-1993 use OEM pinion gear. The PG-300 is 1.920" long.

Measured lengths are of the pinion gear only, no end cap reducer
