

**HOW TO MEASURE YOUR
BDL / BELT DRIVES LTD.
PRESSURE PLATE SHOULDER BOLTS**

Here at Belt Drives LTD. or BDL as most people call us
We have (6) different length shoulder bolts, They range from 1-1/2" long down to
5/8" long.

And depending on which pressure plate or clutch set up you have they vary in
length.

To correctly measure your shoulder bolts, You simply measure the length of the
smooth shoulder itself.

You do this by measuring from just under the head of the shoulder bolt to the end
of the smooth shoulder.

SEE BELOW

Here are the (6) sizes:

- ESB-100, Has a 1-1/2" shoulder ("Pictured above")
- CDSB-100, Has a 1-1/4" shoulder
